

Study on electric vehicle use for ancillary services

A global provider of electric vehicle networks and services sought an assessment of the value in providing demand management services in the National Electricity Market through the use of electric vehicle batteries.

We identified key opportunities in energy trading, National Electricity Market ancillary services, avoiding and delaying network infrastructure investment, and supporting intermittent renewable generation.

Marchment Hill assessed the technical and regulatory constraints, and quantified the scale of each opportunity. As a result, our client understands the true value of the rights over its batteries, and is now able to conduct further detailed analysis on the more attractive opportunities.

Marchment Hill Consulting has offices in three locations which serve Australia and New Zealand, Asia and the Middle East.
